32.10 fl_ask.H File Reference

API for common dialogs.

```
#include "Enumerations.H"
```

Macros

- #define `__fl_attr(x)`

Enumerations

- enum `FL_Beep` {
`FL_BEEP_DEFAULT = 0`, `FL_BEEP_MESSAGE`, `FL_BEEP_ERROR`, `FL_BEEP_QUESTION`,
`FL_BEEP_PASSWORD`, `FL_BEEP_NOTIFICATION` }

Different system beeps available.

Functions

- FL_EXPORT void FL_EXPORT void **fl_alert** (const char *,...) `__fl_attr((__format__ (__printf__`
- FL_EXPORT void FL_EXPORT void FL_EXPORT int **fl_ask** (const char *,...) `__fl_attr((__format__ (__printf__`
- FL_EXPORT void **fl_beep** (int type=`FL_BEEP_DEFAULT`)
Emits a system beep message.
- FL_EXPORT int **fl_choice** (const char *q, const char *b0, const char *b1, const char *b2,...) `__fl_attr((__format__ (__printf__`
- FL_EXPORT int FL_EXPORT const char FL_EXPORT const char FL_EXPORT int **fl_choice_n** (const char *q, const char *b0, const char *b1, const char *b2,...) `__fl_attr((__format__ (__printf__`
- FL_EXPORT int FL_EXPORT const char * **fl_input** (const char *label, const char *deflt=0,...) `__fl_attr((__format__ (__printf__`
- FL_EXPORT void **fl_message** (const char *,...) `__fl_attr((__format__ (__printf__`
- void **fl_message_font** (`FL_Font` f, `FL_Fontsize` s)
- FL_EXPORT void **fl_message_hotspot** (int enable)
Sets whether or not to move the common message box used in many common dialogs like [fl_message\(\)](#), [fl_alert\(\)](#), [fl_ask\(\)](#), [fl_choice\(\)](#), [fl_input\(\)](#), [fl_password\(\)](#) to follow the mouse pointer.
- FL_EXPORT int **fl_message_hotspot** (void)
Gets whether or not to move the common message box used in many common dialogs like [fl_message\(\)](#), [fl_alert\(\)](#), [fl_ask\(\)](#), [fl_choice\(\)](#), [fl_input\(\)](#), [fl_password\(\)](#) to follow the mouse pointer.
- FL_EXPORT int FL_EXPORT const char FL_EXPORT const char FL_EXPORT int FL_EXPORT `FL_Widget` * **fl_message_icon** ()
Gets the [FL_Box](#) icon container of the current default dialog used in many common dialogs like [fl_message\(\)](#), [fl_alert\(\)](#), [fl_ask\(\)](#), [fl_choice\(\)](#), [fl_input\(\)](#), [fl_password\(\)](#)
- FL_EXPORT void **fl_message_title** (const char *title)
Sets the title of the dialog window used in many common dialogs.
- FL_EXPORT void **fl_message_title_default** (const char *title)
Sets the default title of the dialog window used in many common dialogs.
- FL_EXPORT int FL_EXPORT const char FL_EXPORT const char * **fl_password** (const char *label, const char *deflt=0,...) `__fl_attr((__format__ (__printf__`

Variables

- FL_EXPORT void FL_EXPORT void FL_EXPORT int `__deprecated__`
- FL_EXPORT const char * **fl_cancel**
string pointer used in common dialogs, you can change it to another language
- FL_EXPORT const char * **fl_close**
string pointer used in common dialogs, you can change it to another language
- FL_EXPORT `FL_Font` **fl_message_font_**
- FL_EXPORT `FL_Fontsize` **fl_message_size_**
- FL_EXPORT const char * **fl_no**
string pointer used in common dialogs, you can change it to another language
- FL_EXPORT const char * **fl_ok**

string pointer used in common dialogs, you can change it to another language

- FL_EXPORT const char * **fl_yes**

string pointer used in common dialogs, you can change it to another language

32.10.1 Detailed Description

API for common dialogs.

32.10.2 Enumeration Type Documentation

32.10.2.1 Fl_Beep

enum [Fl_Beep](#)

Different system beeps available.

See also

[fl_beep\(int\)](#)

Enumerator

FL_BEEP_DEFAULT	Default beep.
FL_BEEP_MESSAGE	Message beep.
FL_BEEP_ERROR	Error beep.
FL_BEEP_QUESTION	Question beep.
FL_BEEP_PASSWORD	Password beep.
FL_BEEP_NOTIFICATION	Notification beep.

32.11 fl_ask.H

32.29 FI_Device.H File Reference

declaration of classes [Fl_Device](#), [Fl_Graphics_Driver](#), [Fl_Surface_Device](#), [Fl_Display_Device](#), [Fl_Device_Plugin](#).

```

#include <FL/x.H>
#include <FL/Fl_Plugin.H>
#include <FL/Fl_Image.H>
#include <FL/Fl_Bitmap.H>
#include <FL/Fl_Pixmap.H>
#include <FL/Fl_RGB_Image.H>
#include <stdlib.h>

```

Classes

- class [Fl_Device](#)
All graphical output devices and all graphics systems.
- class [Fl_Device_Plugin](#)
This plugin socket allows the integration of new device drivers for special window or screen types.
- class [Fl_Display_Device](#)
A display to which the computer can draw.
- class [Fl_GDI_Graphics_Driver](#)
The MSWindows-specific graphics class.
- class [Fl_GDI_Printer_Graphics_Driver](#)
The graphics driver used when printing on MSWindows.
- class [Fl_Graphics_Driver](#)
A virtual class subclassed for each graphics driver FLTK uses.
- class [Fl_Quartz_Graphics_Driver](#)
The Mac OS X-specific graphics class.
- class [Fl_Surface_Device](#)
A drawing surface that's susceptible to receive graphical output.
- class [Fl_Xlib_Graphics_Driver](#)
The Xlib-specific graphics class.
- struct [Fl_Graphics_Driver::matrix](#)
A 2D coordinate transformation matrix.

Macros

- #define **FL_MATRIX_STACK_SIZE** 32
- #define **FL_REGION_STACK_SIZE** 10
- #define **XPOINT** XPoint

Typedefs

- typedef short **COORD_T**
- typedef void(* **Fl_Draw_Image_Cb**) (void *data, int x, int y, int w, **uchar** *buf)
signature of image generation callback function.

Variables

- **FL_EXPORT Fl_Graphics_Driver * fl_graphics_driver**
Points to the driver that currently receives all graphics requests.

32.29.1 Detailed Description

declaration of classes [Fl_Device](#), [Fl_Graphics_Driver](#), [Fl_Surface_Device](#), [Fl_Display_Device](#), [Fl_Device_Plugin](#).

32.29.2 Typedef Documentation

32.29.2.1 Fl_Draw_Image_Cb

typedef void(* **Fl_Draw_Image_Cb**) (void *data, int x, int y, int w, **uchar** *buf)
signature of image generation callback function.

Parameters

in	<i>data</i>	user data passed to function
in	<i>x,y,w</i>	position and width of scan line in image
out	<i>buf</i>	buffer for generated image data. You must copy <i>w</i> pixels from scanline <i>y</i> , starting at pixel <i>x</i> to this buffer.

32.30 Fl_Device.H

32.33 fl_draw.H File Reference

utility header to pull drawing functions together

```
#include <FL/x.H>
#include <FL/Enumerations.H>
#include <FL/Fl_Window.H>
#include <FL/Fl_Device.H>
```

Macros

- `#define fl_clip fl_push_clip`
Intersects the current clip region with a rectangle and pushes this new region onto the stack (deprecated).

Enumerations

- enum {
`FL_SOLID = 0` , `FL_DASH = 1` , `FL_DOT = 2` , `FL_DASHDOT = 3` ,
`FL_DASHDOTDOT = 4` , `FL_CAP_FLAT = 0x100` , `FL_CAP_ROUND = 0x200` , `FL_CAP_SQUARE = 0x300` ,
`FL_JOIN_MITER = 0x1000` , `FL_JOIN_ROUND = 0x2000` , `FL_JOIN_BEVEL = 0x3000` }

Functions

- `FL_EXPORT int fl_add_symbol` (const char *name, void(*drawit)(`Fl_Color`), int scalable)
Adds a symbol to the system.
- void `fl_arc` (double x, double y, double r, double start, double end)
Adds a series of points to the current path on the arc of a circle.
- void `fl_arc` (int x, int y, int w, int h, double a1, double a2)
Draw ellipse sections using integer coordinates.
- void `fl_begin_complex_polygon` ()
Starts drawing a complex filled polygon.
- void `fl_begin_line` ()
Starts drawing a list of lines.
- void `fl_begin_loop` ()
Starts drawing a closed sequence of lines.
- void `fl_begin_points` ()
Starts drawing a list of points.
- void `fl_begin_polygon` ()
Starts drawing a convex filled polygon.
- `FL_EXPORT char fl_can_do_alpha_blending` ()
Checks whether platform supports true alpha blending for RGBA images.
- `FL_EXPORT void fl_chord` (int x, int y, int w, int h, double a1, double a2)
fl_chord declaration is a place holder - the function does not yet exist
- void `fl_circle` (double x, double y, double r)
fl_circle() is equivalent to fl_arc(x,y,r,0,360), but may be faster.
- int `fl_clip_box` (int x, int y, int w, int h, int &X, int &Y, int &W, int &H)
Intersects the rectangle with the current clip region and returns the bounding box of the result.
- `Fl_Region fl_clip_region` ()
Returns the current clipping region.
- void `fl_clip_region` (`Fl_Region` r)
Replaces the top of the clipping stack with a clipping region of any shape.
- `Fl_Color fl_color` ()
Returns the last fl_color() that was set.
- void `fl_color` (`Fl_Color` c)
Sets the color for all subsequent drawing operations.
- void `fl_color` (int c)

- for back compatibility - use `fl_color(FI_Color c)` instead*
- void `fl_color` (`uchar r`, `uchar g`, `uchar b`)
Sets the color for all subsequent drawing operations.
 - FL_EXPORT void `fl_cursor` (`FI_Cursor`)
Sets the cursor for the current window to the specified shape and colors.
 - FL_EXPORT void `fl_cursor` (`FI_Cursor`, `FI_Color fg`, `FI_Color bg=FL_WHITE`)
 - void `fl_curve` (`double X0`, `double Y0`, `double X1`, `double Y1`, `double X2`, `double Y2`, `double X3`, `double Y3`)
Adds a series of points on a Bezier curve to the path.
 - int `fl_descent` ()
Returns the recommended distance above the bottom of a `fl_height()` tall box to draw the text at so it looks centered vertically in that box.
 - void `fl_draw` (`const char *str`, `int n`, `int x`, `int y`)
Draws starting at the given `x`, `y` location a UTF-8 string of length `n` bytes.
 - FL_EXPORT void `fl_draw` (`const char *str`, `int x`, `int y`)
Draws a nul-terminated UTF-8 string starting at the given `x`, `y` location.
 - FL_EXPORT void `fl_draw` (`const char *str`, `int x`, `int y`, `int w`, `int h`, `FI_Align align`, `FI_Image *img=0`, `int draw↵_symbols=1`)
Fancy string drawing function which is used to draw all the labels.
 - FL_EXPORT void `fl_draw` (`const char *str`, `int x`, `int y`, `int w`, `int h`, `FI_Align align`, `void(*callthis)(const char *, int, int, int)`, `FI_Image *img=0`, `int draw_symbols=1`)
The same as `fl_draw(const char,int,int,int,int,FI_Align,FI_Image*,int)` with the addition of the `callthis` parameter, which is a pointer to a text drawing function such as `fl_draw(const char*, int, int, int)` to do the real work.*
 - void `fl_draw` (`int angle`, `const char *str`, `int n`, `int x`, `int y`)
Draws at the given `x`, `y` location a UTF-8 string of length `n` bytes rotating `angle` degrees counter-clockwise.
 - FL_EXPORT void `fl_draw` (`int angle`, `const char *str`, `int x`, `int y`)
Draws a nul-terminated UTF-8 string starting at the given `x`, `y` location and rotating `angle` degrees counter-clockwise.
 - FL_EXPORT void `fl_draw_box` (`FI_Boxtype`, `int x`, `int y`, `int w`, `int h`, `FI_Color`)
Draws a box using given type, position, size and color.
 - void `fl_draw_image` (`const uchar *buf`, `int X`, `int Y`, `int W`, `int H`, `int D=3`, `int L=0`)
Draws an 8-bit per color RGB or luminance image.
 - void `fl_draw_image` (`FI_Draw_Image_Cb cb`, `void *data`, `int X`, `int Y`, `int W`, `int H`, `int D=3`)
Draws an image using a callback function to generate image data.
 - void `fl_draw_image_mono` (`const uchar *buf`, `int X`, `int Y`, `int W`, `int H`, `int D=1`, `int L=0`)
Draws a gray-scale (1 channel) image.
 - void `fl_draw_image_mono` (`FI_Draw_Image_Cb cb`, `void *data`, `int X`, `int Y`, `int W`, `int H`, `int D=1`)
Draws a gray-scale image using a callback function to generate image data.
 - FL_EXPORT int `fl_draw_pixmap` (`char *const *data`, `int x`, `int y`, `FI_Color=FL_GRAY`)
Draw XPM image data, with the top-left corner at the given position.
 - FL_EXPORT int `fl_draw_pixmap` (`const char *const *cdata`, `int x`, `int y`, `FI_Color=FL_GRAY`)
Draw XPM image data, with the top-left corner at the given position.
 - FL_EXPORT int `fl_draw_symbol` (`const char *label`, `int x`, `int y`, `int w`, `int h`, `FI_Color`)
Draw the named symbol in the given rectangle using the given color.
 - void `fl_end_complex_polygon` ()
Ends complex filled polygon, and draws.
 - void `fl_end_line` ()
Ends list of lines, and draws.
 - void `fl_end_loop` ()
Ends closed sequence of lines, and draws.
 - void `fl_end_points` ()
Ends list of points, and draws.
 - void `fl_end_polygon` ()

- Ends convex filled polygon, and draws.*

 - FL_EXPORT const char * [fl_expand_text](#) (const char *from, char *buf, int maxbuf, double maxw, int &n, double &width, int wrap, int draw_symbols=0)
 - Copy from to buf, replacing control characters with ^X.*
- [Fl_Font fl_font](#) ()
 - Returns the *face* set by the most recent call to [fl_font\(\)](#).
- void [fl_font](#) (Fl_Font face, Fl_Fontsize fsize)
 - Sets the current font, which is then used in various drawing routines.
- FL_EXPORT void [fl_frame](#) (const char *s, int x, int y, int w, int h)
 - Draws a series of line segments around the given box.
- FL_EXPORT void [fl_frame2](#) (const char *s, int x, int y, int w, int h)
 - Draws a series of line segments around the given box.
- void [fl_gap](#) ()
 - Call [fl_gap\(\)](#) to separate loops of the path.
- int [fl_height](#) ()
 - Returns the recommended minimum line spacing for the current font.
- FL_EXPORT int [fl_height](#) (int font, int size)
 - This function returns the actual height of the specified font and size.
- FL_EXPORT const char * [fl_latin1_to_local](#) (const char *t, int n=-1)
 - Converts text from Windows/X11 latin1 character set to local encoding.
- void [fl_line](#) (int x, int y, int x1, int y1)
 - Draws a line from (x,y) to (x1,y1)
- void [fl_line](#) (int x, int y, int x1, int y1, int x2, int y2)
 - Draws a line from (x,y) to (x1,y1) and another from (x1,y1) to (x2,y2)
- void [fl_line_style](#) (int style, int width=0, char *dashes=0)
 - Sets how to draw lines (the "pen").
- FL_EXPORT const char * [fl_local_to_latin1](#) (const char *t, int n=-1)
 - Converts text from local encoding to Windows/X11 latin1 character set.
- FL_EXPORT const char * [fl_local_to_mac_roman](#) (const char *t, int n=-1)
 - Converts text from local encoding to Mac Roman character set.
- void [fl_loop](#) (int x, int y, int x1, int y1, int x2, int y2)
 - Outlines a 3-sided polygon with lines.
- void [fl_loop](#) (int x, int y, int x1, int y1, int x2, int y2, int x3, int y3)
 - Outlines a 4-sided polygon with lines.
- FL_EXPORT const char * [fl_mac_roman_to_local](#) (const char *t, int n=-1)
 - Converts text from Mac Roman character set to local encoding.
- FL_EXPORT void [fl_measure](#) (const char *str, int &x, int &y, int draw_symbols=1)
 - Measure how wide and tall the string will be when printed by the [fl_draw\(\)](#) function with *align* parameter.
- FL_EXPORT int [fl_measure_pixmap](#) (char *const *data, int &w, int &h)
 - Get the dimensions of a pixmap.
- FL_EXPORT int [fl_measure_pixmap](#) (const char *const *cdata, int &w, int &h)
 - Get the dimensions of a pixmap.
- void [fl_mult_matrix](#) (double a, double b, double c, double d, double x, double y)
 - Concatenates another transformation onto the current one.
- int [fl_not_clipped](#) (int x, int y, int w, int h)
 - Does the rectangle intersect the current clip region?
- FL_EXPORT unsigned int [fl_old_shortcut](#) (const char *s)
 - Emulation of XForms named shortcuts.
- FL_EXPORT void [fl_overlay_clear](#) ()
 - Erase a selection rectangle without drawing a new one.
- FL_EXPORT void [fl_overlay_rect](#) (int x, int y, int w, int h)

- Draws a selection rectangle, erasing a previous one by XOR'ing it first.*

 - void **fl_pie** (int x, int y, int w, int h, double a1, double a2)

Draw filled ellipse sections using integer coordinates.
- void **fl_point** (int x, int y)

Draws a single pixel at the given coordinates.
- void **fl_polygon** (int x, int y, int x1, int y1, int x2, int y2)

Fills a 3-sided polygon.
- void **fl_polygon** (int x, int y, int x1, int y1, int x2, int y2, int x3, int y3)

Fills a 4-sided polygon.
- void **fl_pop_clip** ()

Restores the previous clip region.
- void **fl_pop_matrix** ()

Restores the current transformation matrix from the stack.
- void **fl_push_clip** (int x, int y, int w, int h)

Intersects the current clip region with a rectangle and pushes this new region onto the stack.
- void **fl_push_matrix** ()

Saves the current transformation matrix on the stack.
- void **fl_push_no_clip** ()

Pushes an empty clip region onto the stack so nothing will be clipped.
- FL_EXPORT **uchar** * **fl_read_image** (**uchar** *p, int X, int Y, int W, int H, int alpha=0)

Reads an RGB(A) image from the current window or off-screen buffer.
- void **fl_rect** (int x, int y, int w, int h)

Draws a 1-pixel border inside the given bounding box.
- void **fl_rect** (int x, int y, int w, int h, **FL_Color** c)

Draws with passed color a 1-pixel border inside the given bounding box.
- void **fl_rectf** (int x, int y, int w, int h)

Colors with current color a rectangle that exactly fills the given bounding box.
- void **fl_rectf** (int x, int y, int w, int h, **FL_Color** c)

Colors with passed color a rectangle that exactly fills the given bounding box.
- FL_EXPORT void **fl_rectf** (int x, int y, int w, int h, **uchar** r, **uchar** g, **uchar** b)

Colors a rectangle with "exactly" the passed r, g, b color.
- FL_EXPORT void **fl_reset_spot** (void)
- void **fl_restore_clip** ()

Undoes any clobbering of clip done by your program.
- void **fl_rotate** (double d)

Concatenates rotation transformation onto the current one.
- void **fl_rtl_draw** (const char *str, int n, int x, int y)

Draws a UTF-8 string of length n bytes right to left starting at the given x, y location.
- void **fl_scale** (double x)

Concatenates scaling transformation onto the current one.
- void **fl_scale** (double x, double y)

Concatenates scaling transformation onto the current one.
- FL_EXPORT void **fl_scroll** (int X, int Y, int W, int H, int dx, int dy, void(*draw_area)(void *, int, int, int, int), void *data)

Scroll a rectangle and draw the newly exposed portions.
- FL_EXPORT void **fl_set_spot** (int font, int size, int X, int Y, int W, int H, **FL_Window** *win=0)
- FL_EXPORT void **fl_set_status** (int X, int Y, int W, int H)
- FL_EXPORT const char * **fl_shortcut_label** (unsigned int shortcut)

Get a human-readable string from a shortcut value.
- FL_EXPORT const char * **fl_shortcut_label** (unsigned int shortcut, const char **eom)

Get a human-readable string from a shortcut value.

- `FL_Fontsize fl_size ()`
Returns the `size` set by the most recent call to `fl_font()`.
- `FL_EXPORT void fl_text_extents (const char *, int &dx, int &dy, int &w, int &h)`
Determines the minimum pixel dimensions of a nul-terminated string.
- `void fl_text_extents (const char *t, int n, int &dx, int &dy, int &w, int &h)`
Determines the minimum pixel dimensions of a sequence of `n` characters.
- `double fl_transform_dx (double x, double y)`
Transforms distance using current transformation matrix.
- `double fl_transform_dy (double x, double y)`
Transforms distance using current transformation matrix.
- `double fl_transform_x (double x, double y)`
Transforms coordinate using the current transformation matrix.
- `double fl_transform_y (double x, double y)`
Transforms coordinate using the current transformation matrix.
- `void fl_transformed_vertex (double xf, double yf)`
Adds coordinate pair to the vertex list without further transformations.
- `void fl_translate (double x, double y)`
Concatenates translation transformation onto the current one.
- `void fl_vertex (double x, double y)`
Adds a single vertex to the current path.
- `FL_EXPORT double fl_width (const char *txt)`
Returns the typographical width of a nul-terminated string using the current font face and size.
- `double fl_width (const char *txt, int n)`
Returns the typographical width of a sequence of `n` characters using the current font face and size.
- `double fl_width (unsigned int c)`
Returns the typographical width of a single character using the current font face and size.
- `void fl_xyline (int x, int y, int x1)`
Draws a horizontal line from (x,y) to $(x1,y)$
- `void fl_xyline (int x, int y, int x1, int y2)`
Draws a horizontal line from (x,y) to $(x1,y)$, then vertical from $(x1,y)$ to $(x1,y2)$
- `void fl_xyline (int x, int y, int x1, int y2, int x3)`
Draws a horizontal line from (x,y) to $(x1,y)$, then a vertical from $(x1,y)$ to $(x1,y2)$ and then another horizontal from $(x1,y2)$ to $(x3,y2)$
- `void fl_yxline (int x, int y, int y1)`
Draws a vertical line from (x,y) to $(x,y1)$
- `void fl_yxline (int x, int y, int y1, int x2)`
Draws a vertical line from (x,y) to $(x,y1)$, then a horizontal from $(x,y1)$ to $(x2,y1)$
- `void fl_yxline (int x, int y, int y1, int x2, int y3)`
Draws a vertical line from (x,y) to $(x,y1)$ then a horizontal from $(x,y1)$ to $(x2,y1)$, then another vertical from $(x2,y1)$ to $(x2,y3)$

Variables

- `FL_EXPORT char fl_draw_shortcut`

32.33.1 Detailed Description

utility header to pull drawing functions together

32.34 fl_draw.H

[Go to the documentation of this file.](#)

```

[Fl_Image](#), [Fl_RGB_Image](#) classes.

```
#include "Enumerations.H"
#include <stdlib.h>
```

Classes

- class [Fl_Image](#)
Base class for image caching and drawing.
- class [Fl_RGB_Image](#)
The [Fl_RGB_Image](#) class supports caching and drawing of full-color images with 1 to 4 channels of color information.

Enumerations

- enum [Fl_RGB_Scaling](#) { [FL_RGB_SCALING_NEAREST](#) = 0 , [FL_RGB_SCALING_BILINEAR](#) }
The scaling algorithm to use for RGB images.

32.56.1 Detailed Description

[Fl_Image](#), [Fl_RGB_Image](#) classes.

32.56.2 Enumeration Type Documentation

32.56.2.1 Fl_RGB_Scaling

enum [Fl_RGB_Scaling](#)

The scaling algorithm to use for RGB images.

Enumerator

FL_RGB_SCALING_NEAREST	default RGB image scaling algorithm
FL_RGB_SCALING_BILINEAR	more accurate, but slower RGB image scaling algorithm

32.57 Fl_Image.H

32.70 Fl_Menu_Item.H File Reference

```

#include "Fl_Widget.H"
#include "Fl_Image.H"

```

Classes

- struct [Fl_Menu_Item](#)
The *Fl_Menu_Item* structure defines a single menu item that is used by the *Fl_Menu_* class.

Typedefs

- typedef [Fl_Menu_Item](#) **Fl_Menu**

Enumerations

- enum {
[FL_MENU_INACTIVE](#) = 1 , [FL_MENU_TOGGLE](#) = 2 , [FL_MENU_VALUE](#) = 4 , [FL_MENU_RADIO](#) = 8 ,
[FL_MENU_INVISIBLE](#) = 0x10 , [FL_SUBMENU_POINTER](#) = 0x20 , [FL_SUBMENU](#) = 0x40 , [FL_MENU_DIVIDER](#)
= 0x80 ,
[FL_MENU_HORIZONTAL](#) = 0x100 }
- enum {
FL_PUP_NONE = 0 , **FL_PUP_GREY** = [FL_MENU_INACTIVE](#) , **FL_PUP_GRAY** = [FL_MENU_INACTIVE](#) ,
FL_MENU_BOX = [FL_MENU_TOGGLE](#) ,
FL_PUP_BOX = [FL_MENU_TOGGLE](#) , **FL_MENU_CHECK** = [FL_MENU_VALUE](#) , **FL_PUP_CHECK** = [FL_MENU_VALUE](#) ,
FL_PUP_RADIO = [FL_MENU_RADIO](#) ,
FL_PUP_INVISIBLE = [FL_MENU_INVISIBLE](#) , **FL_PUP_SUBMENU** = [FL_SUBMENU_POINTER](#) }

Functions

- FL_EXPORT [Fl_Shortcut fl_old_shortcut](#) (const char *)
Emulation of XForms named shortcuts.

32.70.1 Enumeration Type Documentation

32.70.1.1 anonymous enum

anonymous enum

Enumerator

FL_MENU_INACTIVE	Deactivate menu item (gray out)
FL_MENU_TOGGLE	Item is a checkbox toggle (shows checkbox for on/off state)
FL_MENU_VALUE	The on/off state for checkbox/radio buttons (if set, state is 'on')
FL_MENU_RADIO	Item is a radio button (one checkbox of many can be on)
FL_MENU_INVISIBLE	Item will not show up (shortcut will work)
FL_SUBMENU_POINTER	Indicates user_data() is a pointer to another menu array.
FL_SUBMENU	This item is a submenu to other items.
FL_MENU_DIVIDER	Creates divider line below this item. Also ends a group of radio buttons.
FL_MENU_HORIZONTAL	??? – reserved

32.85 Fl_Paged_Device.H File Reference

declaration of class [Fl_Paged_Device](#).

```
#include <FL/Fl_Device.H>
```

```
#include <FL/Fl_Window.H>
```

Classes

- class [Fl_Paged_Device](#)
Represents page-structured drawing surfaces.
- struct [Fl_Paged_Device::page_format](#)
width, height and name of a page format

Macros

- #define [NO_PAGE_FORMATS](#) 30 /* MSVC6 compilation fix */
Number of elements in enum Page_Format.

32.85.1 Detailed Description

declaration of class [Fl_Paged_Device](#).

32.86 Fl_Paged_Device.H

32.92 Fl_PostScript.H File Reference

declaration of classes [Fl_PostScript_Graphics_Driver](#), [Fl_PostScript_File_Device](#).

```
#include <FL/Fl_Paged_Device.H>
#include <FL/fl_draw.H>
#include <stdarg.h>
```

Classes

- class [Fl_PostScript_File_Device](#)
To send graphical output to a PostScript file.
- class [Fl_PostScript_Graphics_Driver](#)
PostScript graphical backend.

Typedefs

- typedef int() [Fl_PostScript_Close_Command](#)(FILE *)

32.92.1 Detailed Description

declaration of classes [Fl_PostScript_Graphics_Driver](#), [Fl_PostScript_File_Device](#).

32.95 FI_Printer.H File Reference

declaration of classes [Fl_Printer](#), [Fl_System_Printer](#) and [Fl_PostScript_Printer](#).

```

#include <FL/x.H>
#include <FL/Fl_Paged_Device.H>
#include <FL/fl_draw.H>
#include <FL/Fl_Pixmap.H>
#include <FL/Fl_RGB_Image.H>
#include <FL/Fl_Bitmap.H>
#include <stdio.h>
#include <FL/Fl_PostScript.H>

```

Classes

- class [Fl_PostScript_Printer](#)
Print support under Unix/Linux.
- class [Fl_Printer](#)
OS-independent print support.
- class [Fl_System_Printer](#)
Print support under MSWindows and Mac OS.

32.95.1 Detailed Description

declaration of classes [Fl_Printer](#), [Fl_System_Printer](#) and [Fl_PostScript_Printer](#).

32.96 Fl_Printer.H

32.111 Fl_Shared_Image.H File Reference

[Fl_Shared_Image](#) class.

```
#include "Fl_Image.H"
```

Classes

- class [Fl_Shared_Image](#)

This class supports caching, loading, scaling, and drawing of image files.

Typedefs

- typedef [Fl_Image](#) `*(Fl_Shared_Handler) (const char *name, uchar *header, int headerlen)`

Functions

- FL_EXPORT void [fl_register_images](#) ()

Register the image formats.

32.111.1 Detailed Description

[Fl_Shared_Image](#) class.

32.111.2 Function Documentation

32.111.2.1 fl_register_images()

```
FL_EXPORT void fl_register_images ( )
```

Register the image formats.

This function is provided in the fltk_images library and registers all of the "extra" image file formats that are not part of the core FLTK library.

32.112 Fl_Shared_Image.H

32.113 fl_show_colormap.H File Reference

The `fl_show_colormap()` function hides the implementation classes used to provide the popup window and color selection mechanism.

Functions

- FL_EXPORT `Fl_Color fl_show_colormap(Fl_Color oldcol)`

Pops up a window to let the user pick a colormap entry.

32.113.1 Detailed Description

The `fl_show_colormap()` function hides the implementation classes used to provide the popup window and color selection mechanism.

38 /*
39 "character size" is the size of a UTF-8 character in bytes
40 "character width" is the width of a Unicode character in pixels
41 "column" was originally defined as a character offset from the left margin.
42 It was identical to the byte offset. In UTF-8, we have neither a byte offset
43 nor truly fixed width fonts (*). Column could be a pixel value multiplied with
44 an average character width (which is a bearable approximation).
45
46 * in Unicode, there are no fixed width fonts! Even if the ASCII characters may
47 happen to be all the same width in pixels, Chinese characters surely are not.
48 There are plenty of exceptions, like ligatures, that make special handling of
49 "fixed" character widths a nightmare. I decided to remove all references to
50 fixed fonts and see "columns" as a multiple of the average width of a
51 character in the main font.

32.134 Fl_Tree.H File Reference

This file contains the definitions of the [Fl_Tree](#) class.

```

#include <FL/Fl.H>
#include <FL/Fl_Group.H>
#include <FL/Fl_Scrollbar.H>
#include <FL/fl_draw.H>
#include <FL/Fl_Tree_Item.H>
#include <FL/Fl_Tree_Prefs.H>

```

Classes

- class [Fl_Tree](#)

Tree widget.

Enumerations

- enum `Fl_Tree_Reason` {
`FL_TREE_REASON_NONE = 0`, `FL_TREE_REASON_SELECTED`, `FL_TREE_REASON_DESELECTED`,
`FL_TREE_REASON_RESELECTED`,
`FL_TREE_REASON_OPENED`, `FL_TREE_REASON_CLOSED`, `FL_TREE_REASON_DRAGGED` }

The reason the callback was invoked.

32.134.1 Detailed Description

This file contains the definitions of the `Fl_Tree` class.

32.134.2 Enumeration Type Documentation

32.134.2.1 `Fl_Tree_Reason`

enum `Fl_Tree_Reason`

The reason the callback was invoked.

Enumerator

<code>FL_TREE_REASON_NONE</code>	unknown reason
<code>FL_TREE_REASON_SELECTED</code>	an item was selected
<code>FL_TREE_REASON_DESELECTED</code>	an item was de-selected
<code>FL_TREE_REASON_RESELECTED</code>	an item was re-selected (e.g. double-clicked)
<code>FL_TREE_REASON_OPENED</code>	an item was opened
<code>FL_TREE_REASON_CLOSED</code>	an item was closed
<code>FL_TREE_REASON_DRAGGED</code>	an item was dragged into a new place

32.135 `Fl_Tree.H`

32.140.2 Enumeration Type Documentation

32.140.2.1 Fl_Tree_Connector

enum [Fl_Tree_Connector](#)

Defines the style of connection lines between items.

Enumerator

FL_TREE_CONNECTOR_NONE	Use no lines connecting items.
FL_TREE_CONNECTOR_DOTTED	Use dotted lines connecting items (default)
FL_TREE_CONNECTOR_SOLID	Use solid lines connecting items.

32.140.2.2 Fl_Tree_Item_Draw_Mode

enum [Fl_Tree_Item_Draw_Mode](#)

Bit flags that control how item's labels and widget(s) are drawn in the tree via `item_draw_mode()`.

Enumerator

FL_TREE_ITEM_DRAW_DEFAULT	If widget() defined, draw in place of label, and widget() tracks item height (default)
FL_TREE_ITEM_DRAW_LABEL_AND_WIDGET	If widget() defined, include label to the left of the widget.
FL_TREE_ITEM_HEIGHT_FROM_WIDGET	If widget() defined, widget()'s height controls item's height.

32.140.2.3 Fl_Tree_Item_Reselect_Mode

enum [Fl_Tree_Item_Reselect_Mode](#)

Defines the ways an item can be (re) selected via `item_reselect_mode()`.

Enumerator

FL_TREE_SELECTABLE_ONCE	Item can only be selected once (default)
FL_TREE_SELECTABLE_ALWAYS	Enables FL_TREE_REASON_RESELECTED events for callbacks.

32.140.2.4 Fl_Tree_Select

enum [Fl_Tree_Select](#)

Tree selection style.

Enumerator

FL_TREE_SELECT_NONE	Nothing selected when items are clicked.
FL_TREE_SELECT_SINGLE	Single item selected when item is clicked (default)
FL_TREE_SELECT_MULTI	Multiple items can be selected by clicking with SHIFT, CTRL or mouse drags.
FL_TREE_SELECT_SINGLE_DRAGGABLE	Single items may be selected, and they may be. reordered by mouse drag.

32.140.2.5 Fl_Tree_Sort

enum [Fl_Tree_Sort](#)

Sort order options for items added to the tree.

Enumerator

FL_TREE_SORT_NONE	No sorting; items are added in the order defined (default).
FL_TREE_SORT_ASCENDING	Add items in ascending sort order.
FL_TREE_SORT_DESCENDING	Add items in descending sort order.

32.142 fl_types.h File Reference

This file contains simple "C"-style type definitions.

Typedefs

Miscellaneous

- typedef unsigned int **FI_Char**
24-bit Unicode character - upper 8 bits are unused
- typedef const char * **FI_CString**
Flexible length UTF-8 Unicode read-only string.
- typedef unsigned int **FI_Shortcut**
24-bit Unicode character + 8-bit indicator for keyboard flags
- typedef char * **FI_String**
Flexible length UTF-8 Unicode text.
- typedef unsigned char **uchar**
unsigned char
- typedef unsigned long **ulong**
unsigned long

32.142.1 Detailed Description

This file contains simple "C"-style type definitions.

32.142.2 Typedef Documentation

32.142.2.1 FI_CString

```
typedef const char* FI_CString
```

Flexible length UTF-8 Unicode read-only string.

See also

[FI_String](#)

32.142.2.2 FI_String

```
typedef char* FI_String
```

Flexible length UTF-8 Unicode text.

Todo FIXME: temporary (?) typedef to mark UTF-8 and Unicode conversions

header for Unicode and UTF-8 character handling

```

#include "Fl_Export.H"
#include "fl_types.h"
#include <stdio.h>
#include <string.h>
#include <stdlib.h>
#include <sys/types.h>
#include <sys/stat.h>
#include <locale.h>

```

Macros

- `#define xchar` unsigned short

Functions

- FL_EXPORT int [fl_access](#) (const char *f, int mode)
Cross-platform function to test a files access() with a UTF-8 encoded name or value.
- FL_EXPORT int [fl_chmod](#) (const char *f, int mode)
Cross-platform function to set a files mode() with a UTF-8 encoded name or value.
- FL_EXPORT int [fl_execvp](#) (const char *file, char *const *argv)
- FL_EXPORT FILE * [fl_fopen](#) (const char *f, const char *mode)
Cross-platform function to open files with a UTF-8 encoded name.
- FL_EXPORT char * [fl_getcwd](#) (char *b, int l)
Cross-platform function to get the current working directory as a UTF-8 encoded value.
- FL_EXPORT char * [fl_getenv](#) (const char *v)
Cross-platform function to get environment variables with a UTF-8 encoded name or value.
- FL_EXPORT char [fl_make_path](#) (const char *path)
Cross-platform function to recursively create a path in the file system.

- FL_EXPORT void [fl_make_path_for_file](#) (const char *path)
Cross-platform function to create a path for the file in the file system.
- FL_EXPORT int [fl_mkdir](#) (const char *f, int mode)
Cross-platform function to create a directory with a UTF-8 encoded name.
- FL_EXPORT unsigned int [fl_nonspacing](#) (unsigned int ucs)
Returns true if the Unicode character `ucs` is non-spacing.
- FL_EXPORT int [fl_open](#) (const char *f, int oflags,...)
Cross-platform function to open files with a UTF-8 encoded name.
- FL_EXPORT int [fl_rename](#) (const char *f, const char *n)
Cross-platform function to rename a filesystem object using UTF-8 encoded names.
- FL_EXPORT int [fl_rmdir](#) (const char *f)
Cross-platform function to remove a directory with a UTF-8 encoded name.
- FL_EXPORT int [fl_stat](#) (const char *f, struct stat *b)
Cross-platform function to `stat()` a file using a UTF-8 encoded name or value.
- FL_EXPORT int [fl_system](#) (const char *cmd)
Cross-platform function to run a system command with a UTF-8 encoded string.
- FL_EXPORT int [fl_tolower](#) (unsigned int ucs)
Returns the Unicode lower case value of `ucs`.
- FL_EXPORT int [fl_toupper](#) (unsigned int ucs)
Returns the Unicode upper case value of `ucs`.
- FL_EXPORT unsigned [fl_ucs_to_Utf16](#) (const unsigned ucs, unsigned short *dst, const unsigned dstlen)
- FL_EXPORT int [fl_unlink](#) (const char *f)
Cross-platform function to `unlink()` (that is, delete) a file using a UTF-8 encoded filename.
- FL_EXPORT char * [fl_utf2mbcs](#) (const char *s)
Converts UTF-8 string `s` to a local multi-byte character string.
- FL_EXPORT const char * [fl_utf8back](#) (const char *p, const char *start, const char *end)
- FL_EXPORT int [fl_utf8bytes](#) (unsigned ucs)
Return the number of bytes needed to encode the given UCS4 character in UTF-8.
- FL_EXPORT unsigned [fl_utf8decode](#) (const char *p, const char *end, int *len)
- FL_EXPORT int [fl_utf8encode](#) (unsigned ucs, char *buf)
- FL_EXPORT unsigned [fl_utf8from_mb](#) (char *dst, unsigned dstlen, const char *src, unsigned srclen)
- FL_EXPORT unsigned [fl_utf8froma](#) (char *dst, unsigned dstlen, const char *src, unsigned srclen)
- FL_EXPORT unsigned [fl_utf8fromwlc](#) (char *dst, unsigned dstlen, const wchar_t *src, unsigned srclen)
- FL_EXPORT const char * [fl_utf8fwd](#) (const char *p, const char *start, const char *end)
- FL_EXPORT int [fl_utf8len](#) (char c)
Returns the byte length of the UTF-8 sequence with first byte `c`, or -1 if `c` is not valid.
- FL_EXPORT int [fl_utf8len1](#) (char c)
Returns the byte length of the UTF-8 sequence with first byte `c`, or 1 if `c` is not valid.
- FL_EXPORT int [fl_utf8locale](#) (void)
- FL_EXPORT int [fl_utf8test](#) (const char *src, unsigned len)
- FL_EXPORT unsigned [fl_utf8to_mb](#) (const char *src, unsigned srclen, char *dst, unsigned dstlen)
- FL_EXPORT unsigned [fl_utf8toa](#) (const char *src, unsigned srclen, char *dst, unsigned dstlen)
- FL_EXPORT unsigned [fl_utf8toUtf16](#) (const char *src, unsigned srclen, unsigned short *dst, unsigned dstlen)
- FL_EXPORT unsigned [fl_utf8towc](#) (const char *src, unsigned srclen, wchar_t *dst, unsigned dstlen)
Converts a UTF-8 string into a wide character string.
- FL_EXPORT int [fl_utf_nb_char](#) (const unsigned char *buf, int len)
Returns the number of Unicode chars in the UTF-8 string.
- FL_EXPORT int [fl_utf_strcasecmp](#) (const char *s1, const char *s2)
UTF-8 aware `strcasecmp` - converts to Unicode and tests.
- FL_EXPORT int [fl_utf_strncasecmp](#) (const char *s1, const char *s2, int n)
UTF-8 aware `strncasecmp` - converts to lower case Unicode and tests.
- FL_EXPORT int [fl_utf_tolower](#) (const unsigned char *str, int len, char *buf)

Converts the string `str` to its lower case equivalent into `buf`.

- FL_EXPORT int `fl_utf_toupper` (const unsigned char *str, int len, char *buf)

Converts the string `str` to its upper case equivalent into `buf`.

- FL_EXPORT int `fl_wcwidth` (const char *src)
extended wrapper around `fl_wcwidth_(unsigned int ucs)` function.
- FL_EXPORT int `fl_wcwidth_` (unsigned int ucs)
wrapper to adapt Markus Kuhn's implementation of `wcwidth()` for FLTK

32.150 Fl_Widget.H File Reference

[Fl_Widget](#), [Fl_Label](#) classes .

```
#include "Enumerations.H"
```

Classes

- struct [Fl_Label](#)
This struct stores all information for a text or mixed graphics label.
- class [Fl_Widget](#)
Fl_Widget is the base class for all widgets in FLTK.

Macros

- #define [FL_RESERVED_TYPE](#) 100
Reserved type numbers (necessary for my cheapo RTTI) start here.

Typedefs

- typedef void() [Fl_Callback](#)([Fl_Widget](#) *, void *)
Default callback type definition for all fltk widgets (by far the most used)
- typedef void() [Fl_Callback0](#)([Fl_Widget](#) *)
One parameter callback type definition passing only the widget.
- typedef void() [Fl_Callback1](#)([Fl_Widget](#) *, long)
Callback type definition passing the widget and a long data value.
- typedef [Fl_Callback](#) * [Fl_Callback_p](#)
Default callback type pointer definition for all fltk widgets.
- typedef long [fl_intptr_t](#)
- typedef unsigned long [fl_uintptr_t](#)

32.150.1 Detailed Description

[Fl_Widget](#), [Fl_Label](#) classes .

32.150.2 Macro Definition Documentation

32.150.2.1 FL_RESERVED_TYPE

```
#define FL_RESERVED_TYPE 100
```

Reserved type numbers (necessary for my cheapo RTTI) start here.

Grep the header files for "RESERVED_TYPE" to find the next available number.

32.150.3 Typedef Documentation

32.150.3.1 fl_intptr_t

```
typedef long fl_intptr_t
```

Todo typedef's fl_intptr_t and fl_uintptr_t should be documented.

32.151 Fl_Widget.H

Go to the documentation of this file.

32.152 FI_Window.H File Reference

[Fl_Window](#) widget .

```

#include "Fl_Group.H"
#include "Fl_Bitmap.H"
#include <stdlib.h>

```

Classes

- class [Fl_Window](#)
This widget produces an actual window.
- struct [Fl_Window::shape_data_type](#)
Data supporting a non-rectangular window shape.

Macros

- #define [FL_DOUBLE_WINDOW](#) 0xF1
double window type id
- #define [FL_WINDOW](#) 0xF0
window type id all subclasses have type() >= this

32.152.1 Detailed Description

[Fl_Window](#) widget .

32.153 FI_Window.H

32.158 gl.h File Reference

This file defines wrapper functions for OpenGL in FLTK.

```

#include "Enumerations.H"
#include <GL/gl.h>

```

Functions

- FL_EXPORT void [gl_color](#) (Fl_Color i)
 - Sets the current OpenGL color to an FLTK color.*
- void [gl_color](#) (int c)
 - back compatibility*
- FL_EXPORT int [gl_descent](#) ()
 - Returns the current font's descent.*
- FL_EXPORT void [gl_draw](#) (const char *)
 - Draws a nul-terminated string in the current font at the current position.*
- FL_EXPORT void [gl_draw](#) (const char *, float x, float y)
 - Draws a nul-terminated string in the current font at the given position.*
- FL_EXPORT void [gl_draw](#) (const char *, int n)
 - Draws an array of n characters of the string in the current font at the current position.*
- FL_EXPORT void [gl_draw](#) (const char *, int n, float x, float y)
 - Draws n characters of the string in the current font at the given position.*
- FL_EXPORT void [gl_draw](#) (const char *, int n, int x, int y)
 - Draws n characters of the string in the current font at the given position.*
- FL_EXPORT void [gl_draw](#) (const char *, int x, int y)
 - Draws a nul-terminated string in the current font at the given position.*
- FL_EXPORT void [gl_draw](#) (const char *, int x, int y, int w, int h, Fl_Align)
 - Draws a string formatted into a box, with newlines and tabs expanded, other control characters changed to ^X.*
- FL_EXPORT void [gl_draw_image](#) (const uchar *, int x, int y, int w, int h, int d=3, int ld=0)
- FL_EXPORT void [gl_finish](#) ()
 - Releases an OpenGL context.*
- FL_EXPORT void [gl_font](#) (int fontid, int size)
 - Sets the current OpenGL font to the same font as calling [fl_font\(\)](#)*
- FL_EXPORT int [gl_height](#) ()
 - Returns the current font's height.*
- FL_EXPORT void [gl_measure](#) (const char *, int &x, int &y)
 - Measure how wide and tall the string will be when drawn by the [gl_draw\(\)](#) function.*
- FL_EXPORT void [gl_rect](#) (int x, int y, int w, int h)
 - Outlines the given rectangle with the current color.*
- void [gl_rectf](#) (int x, int y, int w, int h)

- Fills the given rectangle with the current color.*

 - FL_EXPORT void **gl_start** ()
Creates an OpenGL context.
 - FL_EXPORT double **gl_width** (const char *)
Returns the width of the string in the current font.
 - FL_EXPORT double **gl_width** (const char *, int n)
Returns the width of n characters of the string in the current font.
 - FL_EXPORT double **gl_width** (uchar)
Returns the width of the character in the current font.

32.158.1 Detailed Description

This file defines wrapper functions for OpenGL in FLTK.

To use OpenGL from within an FLTK application you MUST use `gl_visual()` to select the default visual before doing `show()` on any windows. Mesa will crash if you try to use a visual not returned by `glxChooseVisual`.

This does not work with [Fl_Double_Window](#)'s! It will try to draw into the front buffer. Depending on the system this will either crash or do nothing (when pixmaps are being used as back buffer and GL is being done by hardware), work correctly (when GL is done with software, such as Mesa), or draw into the front buffer and be erased when the buffers are swapped (when double buffer hardware is being used)

32.158.2 Function Documentation

32.158.2.1 `gl_color()`

```
FL_EXPORT void gl_color (
    Fl_Color i )
```

Sets the current OpenGL color to an FLTK color.

For color-index modes it will use `fl_xpixel(c)`, which is only right if the window uses the default colormap!

32.158.2.2 `gl_draw()` [1/7]

```
FL_EXPORT void gl_draw (
    const char * str )
```

Draws a nul-terminated string in the current font at the current position.

See also

On the Mac OS X platform, see [gl_texture_pile_height\(int\)](#)

32.158.2.3 `gl_draw()` [2/7]

```
FL_EXPORT void gl_draw (
    const char * str,
    float x,
    float y )
```

Draws a nul-terminated string in the current font at the given position.

See also

On the Mac OS X platform, see [gl_texture_pile_height\(int\)](#)

32.158.2.4 gl_draw() [3/7]

```
FL_EXPORT void gl_draw (
    const char * str,
    int n )
```

Draws an array of n characters of the string in the current font at the current position.

See also

On the Mac OS X platform, see [gl_texture_pile_height\(int\)](#)

32.158.2.5 gl_draw() [4/7]

```
FL_EXPORT void gl_draw (
    const char * str,
    int n,
    float x,
    float y )
```

Draws n characters of the string in the current font at the given position.

See also

On the Mac OS X platform, see [gl_texture_pile_height\(int\)](#)

32.158.2.6 gl_draw() [5/7]

```
FL_EXPORT void gl_draw (
    const char * str,
    int n,
    int x,
    int y )
```

Draws n characters of the string in the current font at the given position.

See also

On the Mac OS X platform, see [gl_texture_pile_height\(int\)](#)

32.158.2.7 gl_draw() [6/7]

```
FL_EXPORT void gl_draw (
    const char * str,
    int x,
    int y )
```

Draws a nul-terminated string in the current font at the given position.

See also

On the Mac OS X platform, see [gl_texture_pile_height\(int\)](#)

32.158.2.8 gl_draw() [7/7]

```
FL_EXPORT void gl_draw (
    const char * str,
    int x,
    int y,
    int w,
```

```

    int h,
    FL_Align align )

```

Draws a string formatted into a box, with newlines and tabs expanded, other control characters changed to ^X. and aligned with the edges or center. Exactly the same output as [fl_draw\(\)](#).

32.158.2.9 gl_rect()

```

FL_EXPORT void gl_rect (
    int x,
    int y,
    int w,
    int h )

```

Outlines the given rectangle with the current color.

If [FL_Gl_Window::ortho\(\)](#) has been called, then the rectangle will exactly fill the given pixel rectangle.

32.158.2.10 gl_rectf()

```

void gl_rectf (
    int x,
    int y,
    int w,
    int h ) [inline]

```

Fills the given rectangle with the current color.

See also

[gl_rect\(int x, int y, int w, int h\)](#)

32.159 gl.h

32.164 mac.H File Reference

Mac OS X-specific symbols.

Classes

- class [Fl_Mac_App_Menu](#)
Mac OS-specific class allowing to customize and localize the application menu.

Functions

- void [fl_mac_set_about](#) ([Fl_Callback](#) *cb, void *user_data, int shortcut=0)
Attaches a callback to the "About myprog" item of the system application menu.
- void [fl_open_callback](#) (void(*cb)(const char *))
Register a function called for each file dropped onto an application icon.

Variables

- int [fl_mac_os_version](#)
The version number of the running Mac OS X (e.g., 100604 for 10.6.4)
- int [fl_mac_quit_early](#)
Determines whether cmd-Q or the "Quit xxx" item of application menu terminates the app or only the event loop.
- class [Fl_Sys_Menu_Bar](#) * [fl_sys_menu_bar](#)
The system menu bar.

32.164.1 Detailed Description

Mac OS X-specific symbols.

32.165 mac.H

4 // OS X Core Graphics debugging help for the Fast Light Tool Kit (FLTK).
5 //
6 // Copyright 1998-2010 by Bill Spitzak and others.
7 //
8 // This library is free software. Distribution and use rights are outlined in
9 // the file "COPYING" which should have been included with this file. If this
10 // file is missing or damaged, see the license at:
11 //
12 //     http://www.fltk.org/COPYING.php
13 //
14 // Please report all bugs and problems on the following page:
15 //
16 //     http://www.fltk.org/str.php
17 //
18 //
19 // This file allows easier debugging of Mac OS X Core Graphics
20 // code. This file is normally not included into any FLTK builds,
21 // but since it has proven to be tremendously useful in debugging
22 // the FLTK port to "Quartz", I decided to add this file in case
23 // more bugs show up.
24 //
25 // This header is activated by adding the following
26 // line to "config.h"
27 //     #include "src/cgdebug.h"
28 //
29 // Running "./configure" will remove this line from "config.h".
30 //
31 // When used erroneously, Core Graphics prints warnings to
32 // stderr. This is helpful, however it is not possible to
33 // associate a line number or source file with the warning message.
34 // This header file outputs a trace of CG calls, interweaving
35 // them with CG warnings.
36 //
37 // Matthias
38 //

Utility functions for drawing arcs and circles.

32.174 fl_arci.cxx File Reference

Utility functions for drawing circles using integers.

```

#include <FL/fl_draw.H>
#include <FL/x.H>
#include <config.h>

```

32.174.1 Detailed Description

Utility functions for drawing circles using integers.

32.175 fl_ask.cxx File Reference

Utility Functions for Common Dialogs.

```
#include <stdio.h>
#include <stdarg.h>
#include "flstring.h"
#include <FL/Fl.H>
#include <FL/fl_ask.H>
#include <FL/Fl_Box.H>
#include <FL/Fl_Button.H>
#include <FL/Fl_Return_Button.H>
#include <FL/Fl_Window.H>
#include <FL/Fl_Input.H>
#include <FL/Fl_Secret_Input.H>
#include <FL/x.H>
#include <FL/fl_draw.H>
```

Functions

- void [fl_alert](#) (const char *fmt,...)

Shows an alert message dialog box.
- int [fl_ask](#) (const char *fmt,...)

*Shows a dialog displaying the *fmt* message, this dialog features 2 yes/no buttons.*
- void [fl_beep](#) (int type)

Emits a system beep message.
- int [fl_choice](#) (const char *fmt, const char *b0, const char *b1, const char *b2,...)

*Shows a dialog displaying the printf style *fmt* message, this dialog features up to 3 customizable choice buttons.*
- int [fl_choice_n](#) (const char *fmt, const char *b0, const char *b1, const char *b2,...)

Like [fl_choice\(\)](#) but with extended (negative) return values.
- const char * [fl_input](#) (const char *fmt, const char *defstr,...)

*Shows an input dialog displaying the *fmt* message.*
- void [fl_message](#) (const char *fmt,...)

Shows an information message dialog box.
- void [fl_message_hotspot](#) (int enable)

Sets whether or not to move the common message box used in many common dialogs like [fl_message\(\)](#), [fl_alert\(\)](#), [fl_ask\(\)](#), [fl_choice\(\)](#), [fl_input\(\)](#), [fl_password\(\)](#) to follow the mouse pointer.
- int [fl_message_hotspot](#) (void)

Gets whether or not to move the common message box used in many common dialogs like [fl_message\(\)](#), [fl_alert\(\)](#), [fl_ask\(\)](#), [fl_choice\(\)](#), [fl_input\(\)](#), [fl_password\(\)](#) to follow the mouse pointer.
- [Fl_Widget](#) * [fl_message_icon](#) ()

Gets the [Fl_Box](#) icon container of the current default dialog used in many common dialogs like [fl_message\(\)](#), [fl_alert\(\)](#), [fl_ask\(\)](#), [fl_choice\(\)](#), [fl_input\(\)](#), [fl_password\(\)](#)
- void [fl_message_title](#) (const char *title)

Sets the title of the dialog window used in many common dialogs.
- void [fl_message_title_default](#) (const char *title)

Sets the default title of the dialog window used in many common dialogs.
- const char * [fl_password](#) (const char *fmt, const char *defstr,...)

*Shows an input dialog displaying the *fmt* message.*

Variables

- const char * [fl_cancel](#) = "Cancel"

string pointer used in common dialogs, you can change it to another language
- const char * [fl_close](#) = "Close"

string pointer used in common dialogs, you can change it to another language
- [Fl_Font](#) [fl_message_font_](#) = [FL_HELVETICA](#)

- `Fl_Fontsize fl_message_size_ = -1`
- `const char * fl_no = "No"`
string pointer used in common dialogs, you can change it to another language
- `const char * fl_ok = "OK"`
string pointer used in common dialogs, you can change it to another language
- `const char * fl_yes = "Yes"`
string pointer used in common dialogs, you can change it to another language

32.175.1 Detailed Description

Utility Functions for Common Dialogs.

32.176 fl_boxtype.cxx File Reference

drawing code for common box types.

```
#include <FL/Fl.H>
#include <FL/Fl_Widget.H>
#include <FL/fl_draw.H>
#include <config.h>
```

Macros

- `#define D1 BORDER_WIDTH`
- `#define D2 (BORDER_WIDTH+BORDER_WIDTH)`
- `#define fl_border_box fl_rectbound`
allow consistent naming

Functions

- `void fl_border_frame (int x, int y, int w, int h, Fl_Color c)`
Draws a frame of type FL_BORDER_FRAME.
- `void fl_down_box (int x, int y, int w, int h, Fl_Color c)`
Draws a box of type FL_DOWN_BOX.
- `void fl_down_frame (int x, int y, int w, int h, Fl_Color c)`
Draws a frame of type FL_DOWN_FRAME.
- `void fl_draw_box (Fl_Boxtype t, int x, int y, int w, int h, Fl_Color c)`
Draws a box using given type, position, size and color.
- `void fl_embossed_box (int x, int y, int w, int h, Fl_Color c)`
Draws a box of type FL_EMBOSSED_BOX.
- `void fl_embossed_frame (int x, int y, int w, int h, Fl_Color c)`
Draws a frame of type FL_EMBOSSED_FRAME.
- `void fl_engraved_box (int x, int y, int w, int h, Fl_Color c)`
Draws a box of type FL_ENGRAVED_BOX.
- `void fl_engraved_frame (int x, int y, int w, int h, Fl_Color c)`
Draws a frame of type FL_ENGRAVED_FRAME.
- `void fl_flat_box (int x, int y, int w, int h, Fl_Color c)`
Draws a box of type FL_FLAT_BOX.
- `void fl_frame (const char *s, int x, int y, int w, int h)`
Draws a series of line segments around the given box.
- `void fl_frame2 (const char *s, int x, int y, int w, int h)`
Draws a series of line segments around the given box.
- `const uchar * fl_gray_ramp ()`

- void `fl_internal_boxtype` (`Fl_Boxtype` t, `Fl_Box_Draw_F` *f)
Sets the drawing function for a given box type.
- void `fl_no_box` (int, int, int, int, `Fl_Color`)
Draws a box of type `FL_NO_BOX`.
- void `fl_rectbound` (int x, int y, int w, int h, `Fl_Color` bgcolor)
Draws a bounded rectangle with a given position, size and color.
- void `fl_thin_down_box` (int x, int y, int w, int h, `Fl_Color` c)
Draws a box of type `FL_THIN_DOWN_BOX`.
- void `fl_thin_down_frame` (int x, int y, int w, int h, `Fl_Color`)
Draws a frame of type `FL_THIN_DOWN_FRAME`.
- void `fl_thin_up_box` (int x, int y, int w, int h, `Fl_Color` c)
Draws a box of type `FL_THIN_UP_BOX`.
- void `fl_thin_up_frame` (int x, int y, int w, int h, `Fl_Color`)
Draws a frame of type `FL_THIN_UP_FRAME`.
- void `fl_up_box` (int x, int y, int w, int h, `Fl_Color` c)
Draws a box of type `FL_UP_BOX`.
- void `fl_up_frame` (int x, int y, int w, int h, `Fl_Color`)
Draws a frame of type `FL_UP_FRAME`.

32.176.1 Detailed Description

drawing code for common box types.

32.176.2 Function Documentation

32.176.2.1 `fl_internal_boxtype()`

```
void fl_internal_boxtype (
    Fl_Boxtype t,
    Fl_Box_Draw_F * f )
```

Sets the drawing function for a given box type.

Parameters

in	t	box type
in	f	box drawing function

32.176.2.2 `fl_rectbound()`

```
void fl_rectbound (
    int x,
    int y,
    int w,
    int h,
    Fl_Color bgcolor )
```

Draws a bounded rectangle with a given position, size and color.
Equivalent to drawing a box of type `FL_BORDER_BOX`.

32.177 `fl_cmap.h`

```

32.178 fl_color.cxx File Reference

Color handling.

```
#include "Fl_XColor.H"  
#include <FL/Fl.H>  
#include <FL/x.H>  
#include <FL/fl_draw.H>  
#include "fl_cmap.h"
```

Macros

- `#define fl_overlay 0`
HAVE_OVERLAY determines whether fl_overlay is variable or defined as 0.

Functions

- `Fl_Color fl_color_average (Fl_Color color1, Fl_Color color2, float weight)`
Returns the weighted average color between the two given colors.
- `Fl_Color fl_contrast (Fl_Color fg, Fl_Color bg)`
Returns a color that contrasts with the background color.
- `Fl_Color fl_inactive (Fl_Color c)`
Returns the inactive, dimmed version of the given color.
- `ulong fl_xpixel (Fl_Color i)`
Returns the X pixel number used to draw the given FLTK color index.
- `ulong fl_xpixel (uchar r, uchar g, uchar b)`
Returns the X pixel number used to draw the given rgb color.

Variables

- `uchar fl_bluemask`
color mask used in current color map handling
- `int fl_blueshift`
color shift used in current color map handling
- `int fl_extrashift`
color shift used in current color map handling
- `uchar fl_greenmask`
color mask used in current color map handling
- `int fl_greenshift`
color shift used in current color map handling
- `uchar fl_redmask`
color mask used in current color map handling
- `int fl_redshift`
color shift used in current color map handling
- `Fl_XColor fl_xmap [1][256]`
HAVE_OVERLAY determines whether fl_xmap is one or two planes.

32.178.1 Detailed Description

Color handling.

32.179 FL_compose.cxx File Reference

Utility functions to support text input.

```
#include <FL/Fl.H>
#include <FL/x.H>
```

Variables

- XIC `fl_xim_ic`

32.179.1 Detailed Description

Utility functions to support text input.

32.180 fl_curve.cxx File Reference

Utility for drawing Bezier curves, adding the points to the current `fl_begin/fl_vertex/fl_end` path.

```
#include <FL/fl_draw.H>
#include <math.h>
```

32.180.1 Detailed Description

Utility for drawing Bezier curves, adding the points to the current `fl_begin/fl_vertex/fl_end` path.

Incremental math implementation: I very much doubt this is optimal! From Foley/vanDam page 511. If anybody has a better algorithm, please send it!

32.181 FL_Double_Window.cxx File Reference

`FL_Double_Window` implementation.

```
#include <config.h>
#include <FL/Fl.H>
#include <FL/Fl_Double_Window.H>
#include <FL/Fl_Overlay_Window.H>
#include <FL/Fl_Printer.H>
#include <FL/x.H>
#include <FL/fl_draw.H>
```

Functions

- void `fl_begin_offscreen` (FL_Offscreen ctx)
Send all subsequent drawing commands to this offscreen buffer.
- char `fl_can_do_alpha_blending` ()
Checks whether platform supports true alpha blending for RGBA images.
- void `fl_copy_offscreen` (int x, int y, int w, int h, FL_Offscreen pixmap, int srcx, int srcy)
Copy a rectangular area of the given offscreen buffer into the current drawing destination.
- FL_Offscreen `fl_create_offscreen` (int w, int h)
Creation of an offscreen graphics buffer.
- void `fl_delete_offscreen` (FL_Offscreen ctx)
Deletion of an offscreen graphics buffer.
- void `fl_end_offscreen` ()
Quit sending drawing commands to the current offscreen buffer.

Variables

- const int **stack_max** = 16

32.181.1 Detailed Description

[Fl_Double_Window](#) implementation.

19 // Internal interface to set up OpenGL.
20 //
21 // A "Fl_Gl_Choice" is created from an OpenGL mode and holds information
22 // necessary to create a window (on X) and to create an OpenGL "context"
23 // (on both X and Win32).
24 //
25 // fl_create_gl_context takes a window (necessary only on Win32) and an
26 // Fl_Gl_Choice and returns a new OpenGL context. All contexts share
27 // display lists with each other.
28 //
29 // On X another fl_create_gl_context is provided to create it for any
30 // X visual.
31 //
32 // fl_set_gl_context makes the given OpenGL context current and makes
33 // it draw into the passed window. It tracks the current one context
34 // to avoid calling the context switching code when the same context
35 // is used, though it is a mystery to me why the GLX/WGL libraries
36 // don't do this themselves...
37 //
38 // fl_no_gl_context clears that cache so the next fl_set_gl_context is
39 // guaranteed to work.
40 //
41 // fl_delete_gl_context destroys the context.
42 //
43 // This code is used by Fl_Gl_Window, gl_start(), and gl_visual()

```

32.184 fl_line_style.cxx File Reference

Line style drawing utility hiding different platforms.

```

#include <FL/Fl.H>
#include <FL/fl_draw.H>
#include <FL/x.H>
#include <FL/Fl_Printer.H>
#include "flstring.h"
#include <stdio.h>

```

Variables

- int `fl_line_width_` = 0

32.184.1 Detailed Description

Line style drawing utility hiding different platforms.

32.185 FL_Paged_Device.cxx File Reference

implementation of class [FL_Paged_Device](#).

```
#include <FL/Fl_Paged_Device.H>
#include <FL/Fl.H>
#include <FL/fl_draw.H>
```

32.185.1 Detailed Description

implementation of class [FL_Paged_Device](#).

32.186 fl_rect.cxx File Reference

Drawing and clipping routines for rectangles.

```
#include <config.h>
#include <FL/Fl.H>
#include <FL/Fl_Widget.H>
#include <FL/Fl_Printer.H>
#include <FL/fl_draw.H>
#include <FL/x.H>
```

Functions

- `FL_Region XRectangleRegion` (int x, int y, int w, int h)

Variables

- int `fl_line_width_`

32.186.1 Detailed Description

Drawing and clipping routines for rectangles.

32.187 fl_vertex.cxx File Reference

Portable drawing code for drawing arbitrary shapes with simple 2D transformations.

```
#include <config.h>
#include <FL/fl_draw.H>
#include <FL/x.H>
#include <FL/Fl.H>
#include <FL/math.h>
#include <stdlib.h>
```

32.187.1 Detailed Description

Portable drawing code for drawing arbitrary shapes with simple 2D transformations.

32.188 Fl_XColor.H

```

5 */
6
7 /*
8 BIG5 with its 13494 characters doesn't fit in a single 94x94 or 96x96
9 block. Therefore Emacs/Mule developers, in a typically Japanese way of
10 thinking, have developed an alternative encoding of BIG5 in two 94x94
11 planes, very similar to the SHIFT_JIS encoding for JISX0208.
12
13 Conversion between BIG5 codes (s1,s2) and BIG5-0 codes (c1,c2):
14 Example. (s1,s2) = 0xA140, (c1,c2) = 0x2121.
15 0xA1 <= s1 <= 0xC7, 0x40 <= s2 <= 0x7E || 0xA1 <= s2 <= 0xFE,
16 0x21 <= c1 <= 0x62, 0x21 <= c2 <= 0x7E.
17 Invariant:
18 157*(s1-0xA1) + (s2 < 0x80 ? s2-0x40 : s2-0x62)
19 = 94*(c1-0x21)+(c2-0x21)
20 Conversion (s1,s2) -> (c1,c2):
21 t := 157*(s1-0xA1) + (s2 < 0x80 ? s2-0x40 : s2-0x62)
22 c1 := (t div 94) + 0x21
23 c2 := (t mod 94) + 0x21
24 Conversion (c1,c2) -> (s1,s2):
25 t := 94*(c1-0x21)+(c2-0x21)
26 t2 := t mod 157
27 s1 := (t div 157) + 0xA1
28 s2 := (t2 < 0x3F ? t2+0x40 : t2+0x62)
29
30 Conversion between BIG5 codes (s1,s2) and BIG5-1 codes (c1,c2):
31 Example. (s1,s2) = 0xC940, (c1,c2) = 0x2121.
32 0xC9 <= s1 <= 0xF9, 0x40 <= s2 <= 0x7E || 0xA1 <= s2 <= 0xFE,
33 0x21 <= c1 <= 0x72, 0x21 <= c2 <= 0x7E.
34 Invariant:
35 157*(s1-0xC9) + (s2 < 0x80 ? s2-0x40 : s2-0x62)
36 = 94*(c1-0x21)+(c2-0x21)
37 Conversion (s1,s2) -> (c1,c2):
38 t := 157*(s1-0xC9) + (s2 < 0x80 ? s2-0x40 : s2-0x62)
39 c1 := (t div 94) + 0x21
40 c2 := (t mod 94) + 0x21
41 Conversion (c1,c2) -> (s1,s2):
42 t := 94*(c1-0x21)+(c2-0x21)

```

```

43 t2 := t mod 157
44 s1 := (t div 157) + 0xC9
45 s2 := (t2 < 0x3F ? t2+0x40 : t2+0x62)
